CHAPTER V

CONCLUSION AND SUGGESTION

This chapter consists of two parts, namely conclusions and suggestions are drawn based on the analysis of the research questions presented in Chapter I. Therefore, this study provides information to inform academic readers, especially future researchers who wish to conduct similar research or continue this research.

5.1 Conclusion

Based on data analysis it can be concluded that King Charles used a lot of deixis, here King Charles discusses more about personal because King Charles talks about his family, namely Queen Elizabeth II. The speech delivered by King Charles was a speech of thanks to all his people and also those who shared their condolences on the death of Queen Elizabeth II, because this speech is personal because of that the most widely used deixis is person deixis along with the types of deixis used in King Charles's speech. In this study finds Person Deixis, Place Deixis, Time Deixis, Social Deixis, and Discourse Deixis. Based on the results of the study, the most used Deixis in King Charles's speech were as follows: Person Deixis was used 109 times, Place Deixis was used 5 times, Time Deixis was used 4 times, Social Deixis was used 9 times, and Discourse Deixis was used 12 times. In King Charles's speech, the most widely used deixis is Personal Deixis wich is 109 times. Meanwhile, the type of Deixis that has the lowest usage in King Charles's speech is Deixis Time, which is only 4 times.

5.2 Suggestion

For student majoring in English, especially those who like to watch speeches from influential figures, it is advisable to understand and study the importance of deixis, because it can help avoid misunderstandings from speakers and listeners. For students to deepen their understanding of usage pragmatics, especially the use of deixis in a speech is wrong, for example, the speech of King Charles because of that, it is suggested:

1. It is recommended that students deepen their knowledge in pragmatics, especially English Education students because pragmatics is the study of language meaning according to context. By understanding the deixis used in speech, there fluency in interacting.

2. It is suggested that anyone researching Deixis in this speech by focusing on just one type of Deixis, or conducting research on Deixis but using other research objects such as journals, novels, films and so on so that can add deixis references.

3. For those who want to research this field, can study pragmatics more deeply because it can add to broaden language knowledge. Language research does not only research in the field of spoken language, but also in the field of language such as novels. In general students study language in spoken form, students should be able to research language with literary data sources, so that pragmatics can not only be developed because pragmatics can not only be developed in the field of spoken language but also in the field of language as in literary works.
